SUMMARY

AI / Software Engineer (B.Tech CSE 2026) building Python backends and LLM-powered data systems: FastAPI, PostgreSQL, REST APIs, Docker, Generative AI, embeddings and semantic search. Robotics & AI Intern at Addverb on robot-learning (VLA) data pipelines with LeRobot, MuJoCo and PyTorch.

EXPERIENCE

Robotics & AI Intern — Addverb Technologies (Advanced Robotics, CEO Office), Noida — May 2026 – Present

- Built teleoperated robot-manipulation datasets used to train **Vision-Language-Action (VLA)** models, recording episodes in **LeRobot** dataset format.
- Automated teleoperation and data-collection workflows with **Bash** across remote and local machines, replacing repetitive manual setup and recording steps for operators.
- Worked with **MuJoCo** simulation and **PyTorch**-based VLA training/evaluation pipelines for robotic manipulation tasks.

Full Stack Developer Intern — PureWashr (Startup India recognised) — Mar 2024 – Feb 2025

- Built a MERN platform (MongoDB, Express, React, Node.js) with real-time scheduling and order tracking, serving **500+ active users**.
- Designed REST APIs and integrated **15+ vendor workflows** for booking, pickup and order-status updates.
- Reduced API latency by **40%** through MongoDB query optimisation, indexing and leaner API response design.

Freelance Software Developer — Jun 2023 – Feb 2024

- Built JWT-based authentication, admin dashboards and automation scripts for multiple client projects using Node.js, Express and MongoDB.
- Reduced API response time by **50%** by adding caching for frequently read endpoints.

PROJECTS

DataLens — Data-quality platform for LLM fine-tuning datasets | *Python, FastAPI, PostgreSQL/pgvector, Redis, Docker, React* — Live demo | GitHub

- Engineered a FastAPI + Redis/arq data pipeline that imports Hugging Face instruction/chat datasets and runs **8 quality checks per sample**: MinHash/LSH near-duplicates, PII (Aadhaar, cards, API keys), refusal boilerplate, length outliers, formatting.
- Built natural-language search where an LLM (Gemini/Claude) produces a validated filter object (never raw SQL), with a deterministic rule-based fallback; deterministic train/val JSONL export.
- Added semantic search: **bge-small embeddings in pgvector with an HNSW index** (~6 ms top-25 queries, recall 1.0 vs exact search); live static demo runs the same model in the browser.
- On databricks-dolly-15k (**15,011 rows**): import ~7 s, QC ~15 s; surfaced 16 exact duplicates, 9 near-duplicates, 8 PII rows and 6 refusal answers. **280 pytest tests**.

ATS Resume Checker | *Python, Google Gemini API, Streamlit* — Live | GitHub

- Built an LLM-powered resume analyser on the Gemini API that scores resumes against a job description and reports missing keywords and section-level feedback.
- Designed prompt templates for structured JSON output, added PDF parsing for resume input and deployed the app on Streamlit.

Other: AlgoFlow Tracker — DSA progress tracker (Next.js, MongoDB); SYNCRONET-AI — density-based adaptive traffic-signal simulation (Python, Pygame); Hand Gesture Control — gesture and voice control of the desktop (OpenCV, MediaPipe).

SKILLS

AI / ML & LLM: Machine Learning, Deep Learning, Generative AI, LLM APIs (Gemini, Claude), prompt engineering, structured output, embeddings, semantic search, PyTorch, Hugging Face
Languages: Python, SQL, Java, JavaScript, TypeScript, Bash
Backend: FastAPI, Django, Node.js, Express, REST APIs
Databases: PostgreSQL, pgvector, Redis, MongoDB
Robotics & CV: Computer Vision, LeRobot, MuJoCo, OpenCV, MediaPipe
Frontend: React, Next.js, Tailwind CSS
Tools: Docker, Linux, Git/GitHub, pytest (unit & integration testing), Data Structures & Algorithms

EDUCATION

B.Tech, Computer Science & Engineering (lateral entry) — CGPA: 7.8/10 — 2023 – 2026
G L Bajaj Institute of Technology & Management, Greater Noida (AKTU)

Diploma, Computer Science — 71% — 2020 – 2023
Government Polytechnic Deeh, Unnao (BTEUP)
